Lithium-ion Rechargeable Cell Battery

**Model No.: GMB3048**

Specs Approval

Name of Customer:       Name of Supplier:

Guangzhou Markyn Battery Co., Ltd

Add.: Block B1, Dashi Town, Panyu District, Guangzhou C, PRC

TEL 0086-20-61906348  FAX 0086-20-61906358

5. Battery Characteristics
6. Important Notes
Guangzhou Markyn Battery Co., Ltd

Model No    :       GMB3048

1. Applicable Scope
   This specs approval is applied only for the lithium-ion rechargeable cell battery produced by GMB

2. Type of Products
   • Type : Lithium-ion rechargeable cell battery
     • LIR3048   Model : LiR3048

3. General Features
   Long Cycle Life
   Under normal usage, the cycle life of the battery can be ≥500 circles while with capacity ≥80%
   High Power Density
   High power density makes the battery light in weight and small in dimension. It can be used in small devices.
   Safe and Reliable
   No floating metal lithium assures a safer usage.
   High working voltage
   Working voltage is up to 3.6V, approx. 3 times of the voltage of NI-MH or NI-CD, which reduces the quantity of the battery needed in certain application.
   No memory effect
   No memory effect assures a constant maximum application.
   Low self-discharge rate : ≤7%/month
   Good Consistency
   Good consistency is showed in battery capacity, internal resistance, discharge platform and capacity retention. A strict complete internal quality control is subject to the ISO9000 system in the company’s production.
4. Spec Chart

Internal resistance test standard:
CC charge 0.5mA / voltage up to 4.25V; Then CV charge.
Terminate charging when the charging current value is less than 0.05CmA.
Rest for 60 minutes, then test the battery by 1000Hz internal resistance tester.

5. Battery Characteristics

5.1 Test Conditions
- Temperature 20 ±1
- Relative Humidity: ≤75 ±5
- Atmosphere pressure 1atm

5.2 Discharge Characteristics
- The test should be conducted under the condition below:
  - In a temperature of 20±5, CC charge 0.5CmA / voltage up to 4.25V; Then CV charge.
  - Terminate charging when the charging current value is less than 0.05CmA.
  - Rest for no more than 60 minutes,
  - Discharge CC at 0.5CmA to 2.75V.

5.3 Charge Characteristics
- The battery can be charged by one of the following methods:
  - Standard Charge: Temperature 20±1, CC charge at 0.5CmA to 4.25V; turn to CV charge; Terminate charging when the charging current value is less than 0.05CmA.
  - Fast Charge: Temperature 20±5, CC charge at 1.0CmA to 4.25V; turn to CV charge; Terminate charging when the charging current value is less than 0.05CmA.
★For charging/discharging characteristics at various currents see fig 1 or 2.

★For discharging characteristics at various temperatures see fig 3 or 4.

★For Storage characteristics see fig 4.

★For cycle life characteristics see fig 5.

6. Important Notes

- Keep away from source of fire and/or heat.

- Do not disassemble battery and/or battery pack.
  
  Do not connect the positive and negative pole directly using conductive metal; avoid short circuit.

- Do not put the battery into water or damp it.

- Do not cut the battery.

- Do not strike or needle the battery.

- Charge the battery using specified chargers.

- Do not solder the battery directly.

- Observe the correct polarity (+/-)

- Do not use the battery in un-specified application.

- Do not mix the battery in usage with other types of battery.

- Read the instruction manual carefully before use.
