3. TEST CONDITIONS

Test item	Condition	Specification
Condition for standard operation	The test is carried out with new batteries (within a month after delivery). ambient conditions: Temperature: 20±5℃ Humidity：65±20% Tolerances ±5‰ for voltage and current	
(1)Normal Charge	charging at a constant current of 0.1C(2mA) for 16h. Prior to charging, the cell shall have been discharged at a constant current of 0.2C(4mA), down to a final voltage of 1.0V/cell.	
(2)Open Circuit Voltage (OCV)	After 1 hour normal charge	≥1.25V
(3)Capacity	The cell shall be charged. After charging, the cell shall be stored for 1h,then the cell shall have been discharged at a constant current of 0.2C(4mA), down to a final voltage of 1.0V/cell. five cycles are permitted for this test.	⩾300min

4.PRECAUTION

4.1 Never short-circuit or reverse polarity in application.

4.2 Avoid throwing cells into a fire or attempting to disassemble them.

4.3 This is not safety: use the cell without the specified working temperature range, charge and discharge with more than our specified current.

4.4 Do not mix batteries with metal objects during storage or transportation to avoid accidental short-circuit.
